UPGRADING AND REPAIRING NETWORKS

The Authoritative Guide to Expanding and Maintaining Your Network's Capabilities

Learn how to:

- Troubleshoot hardware and software problems
- Add Internet and remote access capabilities to your network
- Connect Windows® 95 clients to NetWare® LANs

Craig Zacker and Paul Doyle

Introduction 1

Who Should Read This Book? 1
What Are the Main Objectives of This Book? 1
What Should You Get Out of This Book? 3

I Understanding Networks 5

1 Network Background 7

The Nature of the Network 7
- Heterogeneity 7
- Modularity 7
- Standards 8

The Scope of Networking 8
- Growth Rate 9
- Network Awareness 9
- Network Readiness 10
- Technology 10

Today's Networks 10
- Legacy Systems 10
- The Modern Network 11
- The Future 11

Summary 12

2 Overview of Network Systems and Services 13

The Client/Server Network 13
The Peer-To-Peer Network 16
- Client/Server versus Peer-To-Peer 18

Fundamental Networking Concepts 19
- Protocols 20
- Cable Types 21
- Network Topologies 24
- Data Link Standards 27

Repeaters, Bridges, Routers, and Switches 32
- Repeaters 32
- Bridges 32
- Routers 34
- Switches 36

Network Services 36
- File Serving and Sharing 36
- Printer Sharing 47

Network Accounting and Auditing 52
Local Area Network Communications Applications 53
Summary 55

3 The OSI Model: Bringing Order to Chaos 57

Terminology 60
The Physical Layer 63
Physical Layer Media Specifications 64
Signaling Types 65
The Data Link Layer 68
Media Access Control 70
Addressing 70
Error Checking 71
The Logical Link Control Frame 71
The Network Layer 72
Connection-Oriented Protocols 75
Connectionless Protocols 76
The Transport Layer 78
Quality of Service Criteria 79
Multiplexing 80
Error Detection and Recovery 82
Transport Protocols 83
The Session Layer 83
Dialogue Control 85
Dialogue Separation 87
The Presentation Layer 89
The Application Layer 92
ACSE (Association Control Service Element) 93
ROSE (Remote Operations Service Element) and RTSE (Reliable Transfer Service Element) 94
CCRSE (Commitment, Concurrency, and Recovery Service Element) 94
SASEs 94
Summary 95

4 Upgrading to a WAN 97

Differentiating a WAN from a LAN 98
Speed 98
Accessibility 98
What's a MAN? 98
Understanding WAN Terminology 99
Packets 99
Packet Switching versus Circuit Switching 101
Speed, Bandwidth, and Throughput 103
Error Control 104
Data Flow 105
Access Areas and WANs 105
Types of WANs 107
Integrated Services Digital Network (ISDN) 107
Switched Multimegabit Data Service (SMDS) 110

Using Fiber Distributed Data Interface (FDDI) across a WAN 115
Frame Relay 120
X.25 125
Summary: Choosing a WAN Type 129
Area To Be Covered 130
Amount of Data 131
Type of Data 131
How Much Money Is Available? 131

II Hardware Platforms: Servers and Workstations 133

5 The Server Platform 135

How Many Servers? 136
About the Motherboard 137
Documentation 138
Microprocessors 139
CISC and RISC Processors 140
File Server Processing 141
Novell NetWare 142
Buying New Processors 143
Other Microprocessors 143
Multiple Processors 146
Memory 149
The Primary Memory Array (DRAM) 150
RAM Caches (SRAM) 157
Memory Interleaving 159
New Memory Technologies 160
I/O Bus Types 161
ISA 162
MCA 163
EISA 165
VESA Local Bus 168
PCI 171
Disk Subsystems 174
Storage Technologies 175
SCSI 176
Network Interface Cards 193
The Case and the Power Supply 193
Pre-Built or "Roll-Your-Own" 194
Summary 196

6 The Workstation Platform 197

Workstation Types and Specifications 198
The IBM PC 199
The XT 200
The AT 201
The Intel 80386 205

The Intel 80486 208
Intel Pentium 210
Intel Pentium Pro 214
Pentium FPU Flaws 216
486 and Pentium Workstations 218
Upgrading Workstations 218
Processor Upgrades 219
Memory Upgrades 224
Workstation Storage Subsystems 225
Network Interface Cards 242
Cases 256
Summary 257

7 Major Network Types 259

Understanding Terminology 260
Fundamentals of Network Communications 260
Ethernet and Its Variants 261
Ethernet Standards 262
The Logical Link Control Sublayer 263
The Media Access Control Sublayer 264
Ethernet Physical Layer Types and Specification 269
Configuration Guidelines for Multiple Ethernet Segments 281
Fast Ethernet 283
Assessing User Need 295
Token Ring 296
Media Access Control in Token-Ring Networks 299
ARCnet 304
FDDI 306
The Physical Layer 308
FDDI-I and FDDI-II 308
The FDDI Frame Type 309
The Downside to FDDI 309
Cable Installation 309
Summary 310

III Software Platforms: NOSs and Clients 311

8 Novell NetWare 313

NetWare 2.x 313
NetWare 3.x 314
The NetWare Command Processor 315
STARTUP.NCF 317
AUTOEXEC.NCF 319
The Transaction Tracking System 323
Server RAM Calculations 324
NetWare Server Memory Pools 329

LAN Drivers 336
The NetWare IPX/SPX Protocol Suite 339
NetWare 4.x 359
Storage Issues 360
Communications Issues 362
Memory Issues 362
NetWare Utilities 363
NetWare Directory Services 364
Summary 369

9 Microsoft Windows NT 371

Why Use NT Server in Your Network? 371
Easy To Use 372
Designed for High-Powered Systems 372
Security 372
Interoperability 373
Centralized Control 373
Long File Name Support 373
Logging Capabilities 373
UPS Service 374
Software Metering 374
Built-In Remote Access Services (RAS) Capability 374
The NT Server Universe 374
Important NT Server Terms 374
Where the Toys Are: Tool Locations 378
Installation 380
Check Your Hardware! 380
Back Up Existing Data 381
Installing NT Server 381
Using NT: Basic System Setup 383
Creating and Tuning User Accounts 383
Sharing Directories and Setting Permissions 389
Setting Up Printers 396
Backing Up and Restoring Files 399
Advanced NT Options 401
Data Protection and Disk Management 401
Keeping Tabs on the System 404
Connecting to Other Network Types 407
Summary 408

10 UNIX Operating Systems 409

The History of UNIX 409
The UNIX Philosophy 411
The Different Flavors of UNIX 411
UNIX and Networking 412
The Client/Server Model 413
The OSI Model 415

The Layers of a UNIX Network ... 416

Summary ... 524

IV Connections 525

13 Hubs: Dumb, Smart, Switching, and Otherwise 527

Hub Architecture 528
Compatible Ports 528
Internal Connections for Ports 529
External Connections 529
Management Capabilities 530
Hub Smarts: Some Are More Equal Than Others 530
Passive Hubs 530
Active Hubs 531
Intelligent Hubs 532
How Many Smarts Do You Need? 534
Improving Hub Reliability 535
Power 535
Keeping Network Problems from Affecting Hubs 537
Hub Redundancy 537
Server-Based Hubs 538
ATM Switches 538
ATM Basics 539
ATM Switches 540
ATM's Place in the LAN 541
Buying ATM Switches 542
Summary 543

14 Repeaters and Bridges 545

Repeaters 545
Repeaters' Place in the Network 546
Repeaters in the Wild 547
Bridges 549
Place in the OSI model 549
Bridges in the Network 552
Filter or Forward? 554
Transparent Bridging versus Translation Bridging 556
Getting There from Here: Routing Methods 557
Buying Repeaters and Bridges 566
Adaptability 567
Cost 567
Management Capability 567
Vendor Support 567
Summary 567

15 Routers 569

Repeaters and Bridges--Network Glue 569
Routers 570
Routers in Pairs 572
The Anatomy of a Router 572
Identifying Physical Characteristics 576
Prioritization 577

Comparing Performance 577
Avoiding Pitfalls 578
Router Planning 579
Network Role-Playing 579
Desktop Data 580
Router Configuration--Hints for the Real World 585
Router Profiles 588
An Ethernet-To-Internet IP Router 588
An Easy-To-Use Wide Area Router 588
A High-Speed, Multi-Port Ethernet-To-Intenet Router 589
A High-Speed, Multi-Port Wide Area Router 589
Wire-Speed Segment Router 589
Multi-Port Ethernet Switching Router 589
Router Support 590
Management Software 590
Support Agreement 590
Software Routers 591
Summary 592

16 Linking to Minis and Mainframes 593

The Earliest Small-To-Large Computer Connections 593
Token Ring's Role in Small-To-Large Computer Connectivity 595
A Small-To-Large Computer Connection's Similarities to Remote Access 595
Applications That Lend Themselves to Small-To-Large Access 596
Industries That Can Benefit from Small-To-Large Computer Connections 596
Remote Access Methods as Models for Linking to Minis or Mainframes 596
Details To Look for in an Access Method 598
Anticipating Your Network's Need To Link to Minis or Mainframes 600
Do-It-Yourself Modeling or Software Tools? 600
Technologies To Link to Minis or Mainframes 601
Application-Specific Access 601
Combining Connectionless and Connection-Oriented Access: A Scenario 602
Strictly Hardware Driven Access: A Scenario 604
Real-World Hardware-Driven Access Technologies 604
Summary 605

V Backups and Other Safety Nets 607

17 Backup Technology: Programs and Data 609

Assessing Backup Needs 610
When To Plan a Backup Strategy? 610
Retrofitting a Backup Plan to an Existing Network 611
Workstation-Based Backups 615

File Server-Based Backups 616
Network Backup Software 617
Backup Software Components 621
Backup Scheduling and Administration 628
Tape Rotation 631
Restores and Testing 636
Traditional Backup Problems 636
Bindery/NDS/Registry 637
Live Databases 638
Workstation OSs 638
Security 639
Other Backup Options 640
Autochangers 640
Hierarchical Storage Management 641
Troubleshooting 642
Media Problem or Hardware Problem? 643
File Server Problems 646
Network Communication Problems 647
Summary 649

18 Backup Technology: Uninterruptible Power Supplies 651

Overview 651
Assessing the Need for a UPS System 651
AC Power Is Not Always Constant 652
Solutions for AC Power Problems 654
Inspect, Test, and Document 654
Dedicated Circuits 655
Use of a UPS System 655
Design 663
What Needs a UPS and What Doesn't? 663
Sizing for Your Needs 663
One Big Unit or Several Small Units? 664
Installing a UPS System 665
Access 665
Ventilation 665
Durability 665
Charging/Testing Batteries 665
File Server Connection 665
Software 665
Documenting 666
Monitoring 666
Things To Look For 667
Frequency 667
Methods 667
Documenting 668
Upgrading 668
How To Know When Upgrading Is Needed 668
Adding More Capacity 668
Trade-Ins 668

Maintaining 669
Batteries Die! Plan for It 669
Replacing Dead Batteries 669
Terminal Connections 669
Testing 669
Methods 669
Frequency 671
Documenting 671
Repairing a UPS 671
Replace Batteries 671
Get a Loaner or Replacement 671
Moving the UPS 672
UPSs Are Heavy and Sensitive 672
Leaking Batteries 672
Time To Replace the Batteries 672
Replacing a UPS 672
Surplus UPSs 672
Disaster Planning 673
Security 673
Training 673
Hardware 674
Software 674
Responding to Alarms 674
Monitoring 675
Testing 675
Future Trends 675
Troubleshooting 676
Summary 676

19 Antivirus Technology 677

Virus Basics 677
What Is a Virus? 677
Why Do Viruses Exist? 678
Types of Virus 679
Virus Propagation 683
The Virus Threat 685
Antivirus Methods 687
Detection Techniques 689
Antivirus Strategy 694
Antivirus Products 702
Criteria 702
Workstation Utilities 704
Server Utilities 706
Summary 708

20 Tools for Restricting Access 709

Security and Network Access 709
Physical Access 711
Access to Workstations 711
Access to the Server 715

Access to the Network 719
Electronic Access 720
LAN Access 720
Remote Console Sessions 723
WAN Access 724
Dial-Up Access 727
File Access 727
Rights 728
Attributes 731
Combining Rights and Attributes 733
Appropriate Access Levels 734
Formulating a Policy 735
Responsibility 735
Risk Assessment 735
Authorized Access versus Unauthorized Access 736
Users' Expectations 736
Finding an Appropriate Security Level 736
Auditing Network Security 737
Summary 737

21 Disaster Planning for Networks 739

The Nature of Disaster 739
Events 740
Breakdown 740
Behavior 740
Key Elements of a Plan 741
Support of Upper Management 741
Clarity of Purpose 741
No Single Point of Failure 744
Flexibility 744
Creating the Disaster Planning Team 745
The Personnel Manager 745
The Network Administrator 745
The Business Manager 746
The Boss 747
Hot and Cold Sites 747
Cold Sites 747
Hot Sites 748
Planning a Site 749
Preparing for Viruses 749
Understanding Viruses 750
How Does a Machine Catch a Virus? 750
Preventing Virus Attacks 751
Running Effective Virus Scans 752
Removing Viruses 752
Data Loss Planning 753
Dynamic Data Replication 753
Backing Up 753
Implementing and Following Up on the Plan 757
Summary: A Sample Disaster Scenario 758

22 Network Preventive Maintenance 763

Do It Right 764
Duplicate It 765
Document It 765
AC Power 767
- Do It Right 767
- Duplicate It 767
- Document It 767

Summary 778

VI Adding Network Services 779

23 Adding Network Printing 781

Networked versus Local Printing 781
Shared Printers 782
Greater Access 782
Print Spooling 782
Central Management 783
Access Control 783
Flexibility 783
Printers and Interfaces 784
Parallel 784
Serial (RS-232) 787
Net-Direct 791
Definitions 792
Print Queue 792
Print Job 793
Print Server 793
The Printing Infrastructure 794
Types of Print Servers 794
Choosing a Configuration 796
Configuring Print Servers 797
PCONSOLE 799
Managing Print Servers 809
Starting a Print Server 809
The PSC Utility 811
Print Service Upgrades 813
Upgrading Existing Printers 813
New Printers 816
Printer Cleaning and Maintenance 817
Maintenance: Laser Printers 817
Maintenance: Dot-Matrix Printers 820
Maintenance: InkJet Printers 821
Summary 822

24 Adding Network CD-ROMs 823

Characteristics of CD-ROM Drives 824
Speed 825
Access Time 826
Buffering 827
Interface to Controller 828
External or Internal 829
Personality Profile 832
Getting Your CD-ROM Drive on the Network 832
Jukeboxes 833
CD-ROM Towers 833
Tower Requirements 834
Share and Share Alike 834
How Do I Share? 835

Disaster Planning for Networked CD-ROM Drives 838
On the Horizon: Asynchronous Transfer Mode 839
Summary 840

25 Adding Network Modems 841

Modulation and Demodulation 841
Some Basic Modem Characteristics 842
Modem Standards 843
Current Modem Standards 844
The PCMCIA Standard 846
Communications Servers 847
Remote Control 847
Remote Access as a Workstation 848
A Dedicated PC as a Remote Access Server 849
Three Networked Modem Scenarios 851
A Small LAN in a Public Library 851
Two Departmental LANs 852
Linking to a WAN 853
Network Modem/Communication Server Checklist 854
Summary 855

26 Adding Internet Access 857

Defining Internet 857
Getting Internet Service 857
Finding an Internet Service Provider 857
Choosing the Right Connection Method 858
Adding Internet Capability to Your Servers 863
Before You Get Started 863
Adding TCP/IP Support to Your Server 866
Adding Internet Capability to Your Clients 868
Adding a Client TCP/IP Stack 868
Adding WWW Browsers 876
Adding Other Internet Applications 878
Publishing Information on the Internet 879
HTTP Servers 880
FTP Servers 880
A Word about Security 881
Firewalls and Proxies 881
Security and Software 882
Viruses 883
Configuring for Security 883
Summary 884

27 Adding Remote Network Access (Telecommuting) 885

Introduction to the Communications Medium 886
The Different Types of Remote Access 886
Remote Control 886
Remote Node 889

Implementing Remote Access Solutions 896
Security Issues 896
Product Solutions 898
Organizational Issues 901
Summary 901

28 Adding Diskless Workstations 903

What Are Diskless Workstations? 903
Remote Boot PROMs 903
The Remote Boot Process 904
Why Use Diskless Workstations? 905
Advantages to Going Diskless 905
Drawbacks to Going Diskless 906
Preparing the Workstation 908
Network Design Considerations 908
Purchasing (Specification and Ordering) 908
Installing the Boot PROM 909
Configuring the Adapter 909
Gathering Information 910
Preparing a DOS Boot Image 912
Preparing the Master Boot Floppy 914
Test the Master Boot Floppy 917
Making the Boot Image File 918
RPLFIX.COM 919
Putting the Boot Image in Its Place 920
Preparing the Server 920
The Logon Area 920
BOOTCONF.SYS 921
IPX PROM Specifics 923
RPL PROM Specifics 923
DOS on the Server 930
Considerations with Multiple Servers 933
Making the Connection: Troubleshooting 934
Normal Sequence of Events 934
Preliminaries 934
Errors While Locating the Boot Image 935
Errors While Loading the Boot Image 937
Errors after Bootup 939
Tricks and Tools 939
Summary 940

29 Adding Wireless Networking 943

Pros and Cons of Wireless Networking 943
Pros 944
Cons 946
A Brief Introduction to Wireless Technology 948
Band Frequency Characteristics 950
How Frequencies Transmit Data 951

Conserving Bandwidth 951
Keeping Communications Secure 954
RF Links 954
Applications 954
Equipment Used in RF Wireless Networking 955
Wide-Area RF Protocols 956
High-Speed WAN Connections 959
Limitations of RF Wireless Networks 960
Infrared Wireless Networks 961
What Are Infrared Signals? 961
IR Applications 961
Disadvantages of IR 963
A Comparison of RF and IR Signaling 963
RF Signaling 964
IR Signaling 964
The Future of Wireless 964
Summary 965

VII Troubleshooting Hardware and Software Problems 967

30 Network Management and SNMP 969

Network-Management Functions 970
What a Network-Management System Should Provide 971
Network Management versus Systems Management 973
Common Network-Management System Features 975
Polling 975
Auto Discovery 976
Device Configuration 976
Graphical Mapping 977
Trapping Events 977
Event Logging 977
Protocol Analysis 978
Network-Management Protocols 979
Understanding SNMP History 979
RMON 986
Planning, Choosing, and Setting Up a Network-Management System 988
How To Plan for a Network-Management System 989
Criteria for Choosing a Network-Management System 991
Setting Up and Maintaining a Network-Management System 992
Managing Emerging Networking Technologies 994
Managing a Switched Network 995
Virtual LANs 996
Summary 996

31 Locating the Problem: Server versus Workstation versus Links 999

Methodology 1000
Trial and Error 1000
Expert System 1000
Problem Space 1001
A Structured Approach 1001
Information Gathering 1007
Network Topology 1008
Network Hardware 1008
Server Configuration 1008
Client Configuration 1010
Applications 1011
User Profile 1011
The Information Database 1011
The Fault Report 1012
Verifying the Fault Report 1013
Intermittent Problems 1013
Tracking Specific Problems 1014
Client Fault Reports 1015
Server Fault Reports 1018
Summary 1019

32 Repairing Common Types of Problems 1021

Server Problems 1021
Troubleshooting 1022
Disk Drives 1025
Network Adapters 1031
Links--Connectivity Problems 1034
Overview of the Fault 1034
Structural Limitations 1034
Workstation Problems 1037
Troubleshooting Procedures 1037
Summary 1043

VIII Appendixes 1045

UPGRADING AND REPAIRING NETWORKS

The Authoritative Guide to Expanding and Maintaining Your Network's Capabilities

Far more than just a "repair" manual, Que's *Upgrading and Repairing Networks* is the most comprehensive network support reference available! Learn about the inner workings of your network, how to install hardware, and troubleshoot problems. Gain in-depth knowledge of major network operating systems such as NetWare® 4.1, UNIX®, and Windows NT™. Learn about backup technology, linking to mainframes, and SNMP from the experts. Special sections include coverage on adding network services and upgrade options, Internet, remote access, and virus protection with troubleshooting tips to help you identify and solve problems. It's all the information you need to maintain or enhance your network!

- In-depth coverage of the major network operating systems
- Learn to configure 32-bit Windows® client software for maximum network efficiency
- Get backup and disaster planning strategies from the experts
- Discover practical ways to protect your network from viruses
- Add printers, CD-ROMs, modems, and wireless components to your network
- Establish secure access to the Internet for your network
- Install hubs, routers, repeaters, and bridges
- Learn how to locate and repair common network problems within servers, workstations, network links, and peripherals
